

ROAD CHOICE ALUMINUM WHEELS DELIVER LASTING VALUE

Road Choice Aluminum Wheels will add value to your vehicles for the life of the equipment, and beyond.

Lighter objects require less force and less fuel to move.

Aluminum wheels will reduce truck weight, improving fuel efficiency and reducing greenhouse gas emissions, whether your truck is empty or fully loaded. The Road Choice 40-pound Aluminum Wheel is one of the lightest on the market.

Upgraded equipment minimizes downtime.

Steel wheels can require frequent rust removal, re-painting and touch-up work, leading to increased downtime and higher costs over the lifetime of the wheel. There's no need to refurbish and refinish Road Choice Aluminum Wheels.

Equipment that runs smoothly lasts longer.

Road Choice Aluminum Wheels better balanced and up to five times stronger than steel wheels.

Investing in the future pays off.

The durability and long life of Road Choice Aluminum Wheels add value to your trucks, even when you're ready to sell them.

AFTERMARKET PRESET®
HUB ASSEMBLIES**

Reduce Downtime

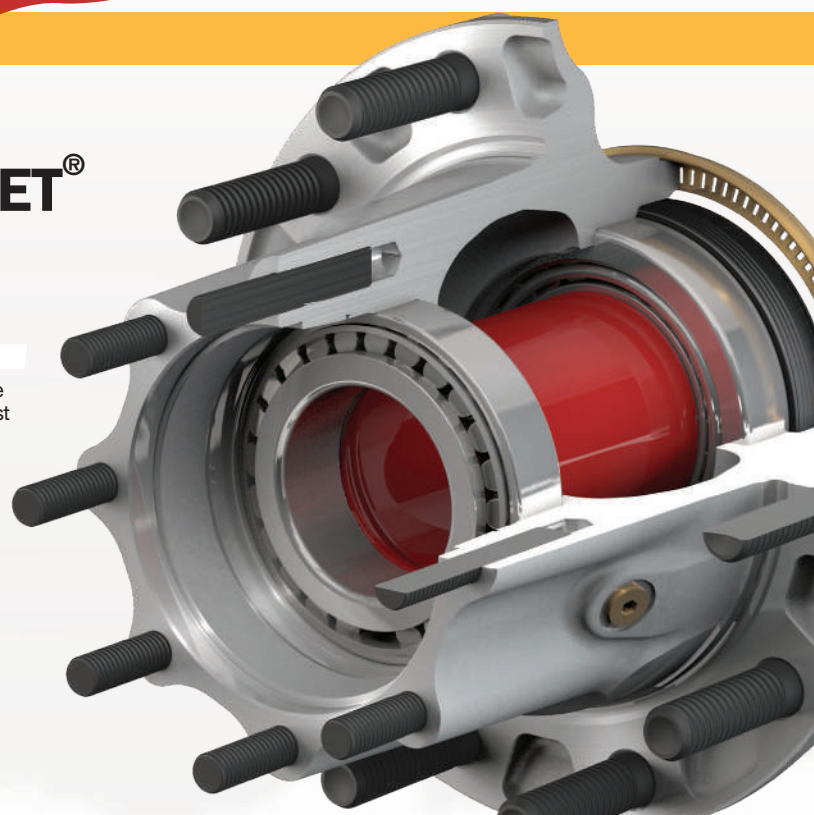

By replacing your wheel ends with Aftermarket PreSet hubs, you save hours compared to the time it would take to rebuild the same hub. That means vehicles are back on the road faster, reducing lost revenue due to downtime.

Reduce Labor Costs

Rebuilding a hub is a complex process requiring replacement of bearing cups and cones, the wheel seal, and manually adjusting the bearings. When armed with the proper parts, tools, and understanding of the service requirements, a technician still needs several hours to do a thorough job. However, by simply replacing the hub, labor costs are greatly diminished.

Reduce Potential for Errors or Misalignment

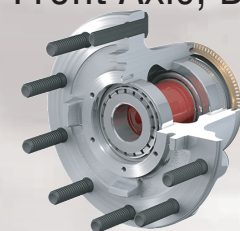

With PreSet hubs, installation is incredibly easy. Operators simply slide the self-piloting, pre-assembled hub onto the spindle, torque the retaining nut, and add lubricant.
